Personal profile
I am a hardworking and determined individual who has experience in serving customers from my previous employment. I have an interest in website design & development, as well as software design & development, after covering topics regarding them during my A-levels in Computer Science and I.T. Linked above on my GitHub page you can find projects I have completed as a proof of experience/skill, regarding software/web development.

Skills
I am proficient in a number of programming languages including C#, Python, Java, with some experience in C, and C++. I can also write in HTML, CSS, JavaScript, PHP, and SQL. Furthermore, I have experience using IDE's including Visual Studio 2019, Visual Studio Code, Eclipse and Sublime Text. I also have experience with frameworks such as React, Django, NodeJS, Angular and more.

I have experience in design tools including WordPress Adobe XD and Figma. I have excellent organisational skills and communications skills in both formal and non-formal settings and enjoy problem solving. I am skilled at finding solutions to intricate problems and work well under pressure. I have also completed a number of courses with the Google Skills tool which can be found at the top of this document under additional information.

Work History
Graphitas – Junior Front-End Web Developer – May 7th 2021 - Now
Currently at Graphitas, I am developing the front-end of websites for clients such as Hughes, and in brief, am given an Adobe XD design to follow and communicate with my team and the client the development of their site. I am involved with a number of projects and my responsibilities can range from designing a site from scratch, to maintaining existing sites. During my time here, I have learned new languages such as LESS and PHP, as well as using systems such as Shopware and Docker.

Universal Web Design – Web Developer – January 4th 2021 - April 23rd 2021
I was responsible for the programming, design, and layout of websites according to client briefs and company specifications. The primary site development tool used was WordPress with additional use of HTML, CSS, JavaScript, PHP, SQL, Python and additional libraries for these such as Django. The role took into consideration user experience and function as well as a level of graphic design.

Fraser Well Management – Data Analyst (Summer Internship) - August 2019
I completed a 4 week internship, through college, as a data analyst at Fraser Wells Management. As part of my internship, I worked alongside other colleagues to study data received from oil rigs and place this information onto an Excel spreadsheet to analyse the company's revenue and expenses. This data was further used by the company to minimise expenses and over time become a more efficient method of increasing the effectiveness of the business.

Education and Training
Lynn Grove Academy – 2013 – 2018
GCSE Grades:
Maths – 5
English – 5
Science – 7
Geography – 6
